About LaserBond

LaserBond is a specialist surface engineering company that was founded in 1992. The Company focuses on the development and application of materials, technologies and methodologies to increase operating performance and wear life of capital-intensive machinery components.

Within these industries, the wear of components can have a profound effect on the productivity and total cost of ownership of their capital equipment. As almost all components fail at the surface, due to material removal through abrasion, erosion, corrosion, cavitation, heat and impact, and any combinations of these wear mechanisms, tailored surface metallurgy will extend its life and enhance its performance.
